1 Delete vSphere License	6
2 Add vSphere license to ESXi	12

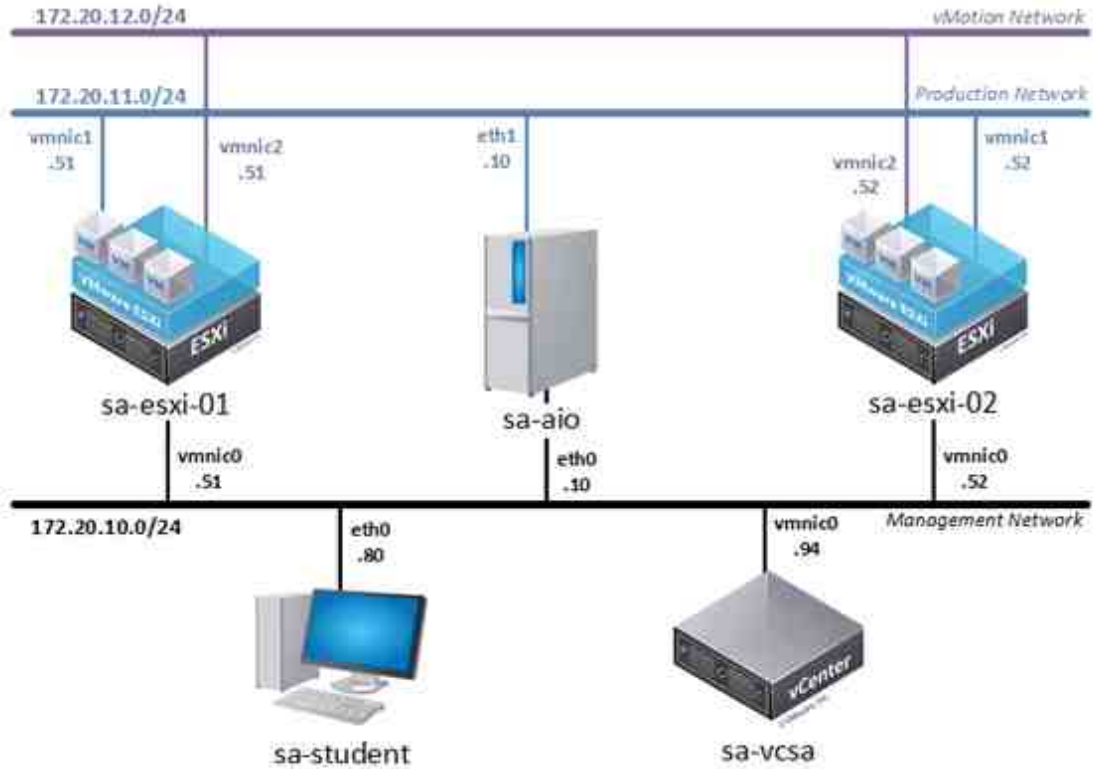

Introduction

In this lab, you will view the vCenter Server license and delete the ESXi license. Once you delete the VMware ESXi license, you will relicense the ESXi hosts.

Objectives

-) View vCenter Server License
-) Delete vSphere license
-) Add a license to ESXi

Lab Topology

Lab Settings

The information in the table below will be needed in order to complete the lab. The task sections below provide details on the use of this information.

Virtual Machine	IP Address	Account	Password
sa-esxi-01	eth0: 172.20.10.51	root	Train1ng\$
sa-esxi-02	eth0: 172.20.10.52	root	Train1ng\$
sa-aio	eth0: 172.20.10.10	sysadmin	vmware123
sa-student	eth0: 172.20.10.80	sysadmin	vmware123
sa-vcsa	eth0: 172.20.10.94	sysadmin@vclass.local	vmware123

1 Delete vSphere License

In this task, you will view the VMware vSphere license and delete the vSphere ESXi licenses.

1. Launch the sa-student virtual machine to access the graphical login screen.

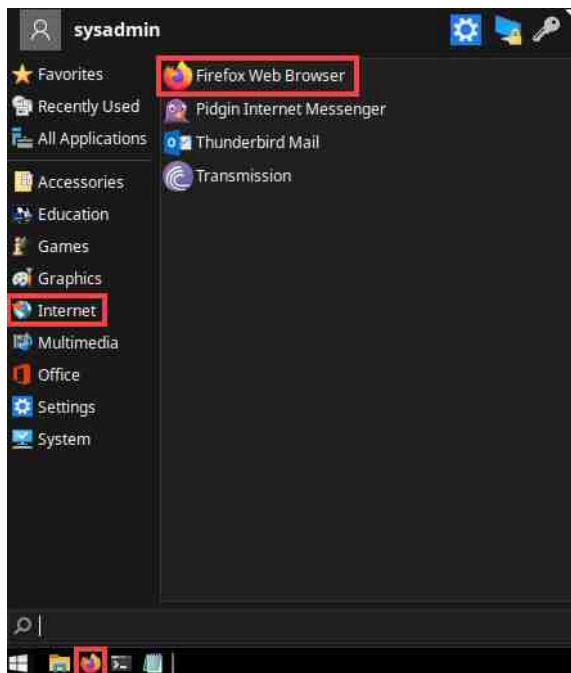

To launch the console window for a virtual machine, you may access by either clicking on the machine's graphic image from the topology page or by clicking on the machine's respective tab from the navigation bar.

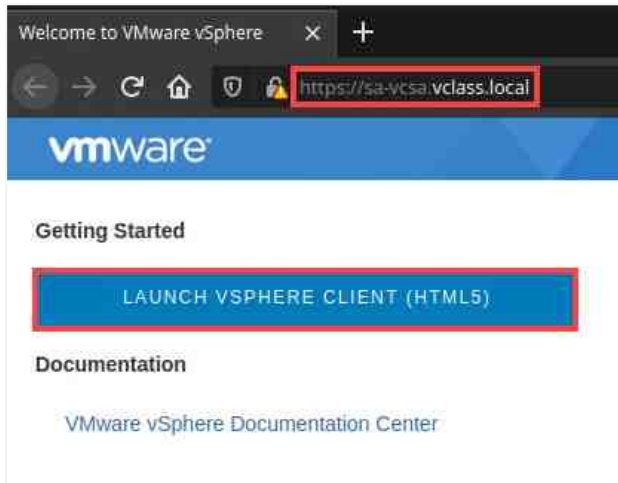

2. Log in as `sysadmin` using the password `vmware123`.

3. Launch the Mozilla Firefox web browser by either clicking on the icon shortcut found on the bottom toolbar or by navigating to Start Menu > Internet > Firefox Web Browser.

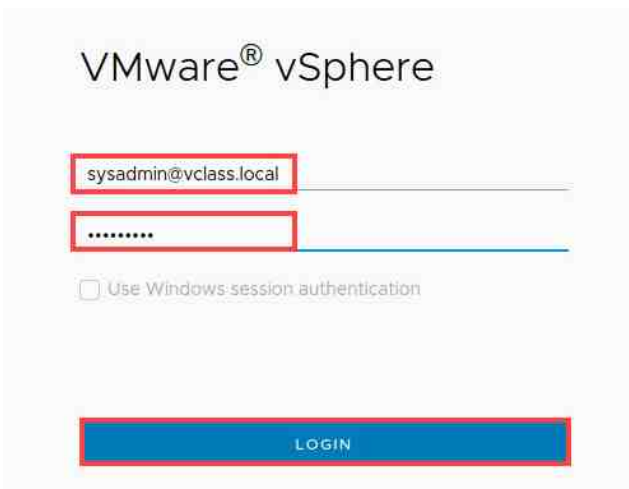

4. Notice the homepage is automatically configured to load the URL address of the VMware vCenter Server Appliance (sa-vcasa virtual machine). Click on the LAUNCH VSPHERE CLIENT (HTML5) button to launch the vSphere Client.

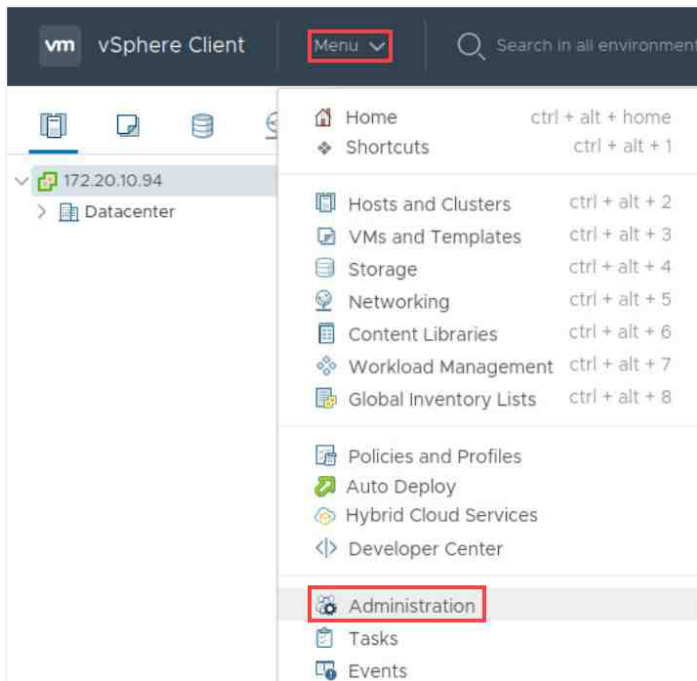

If you cannot successfully load the VMware Getting Started webpage, then please wait an additional 3-5 minutes and refresh the page to continue. During this time, the vCenter Server Appliance is still booting up and requires extra time to initialize.

5. In the Username text field, type `sysadmin@vclass.local` and in the Password text field, type `vmware123`. Click on LOGIN.

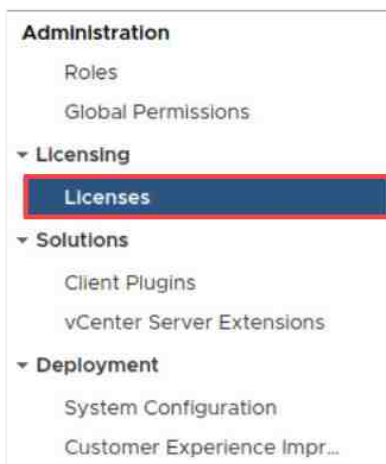

You may ignore the “browser-OS combination” warning message presented on the VMware vCenter Single Sign-On page and continue moving forward with the lab.

6. In the vSphere Client, click the Menu icon and select Administration.

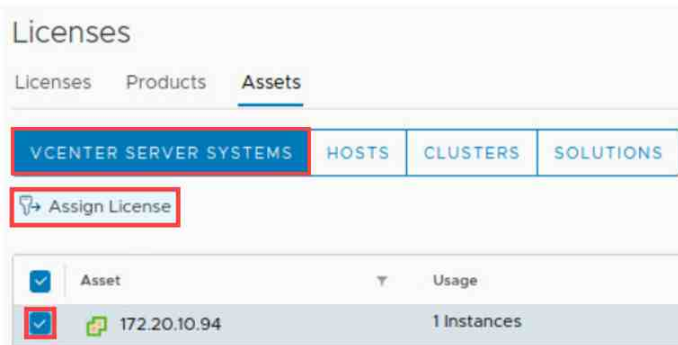

7. In the navigator pane, select Licenses.

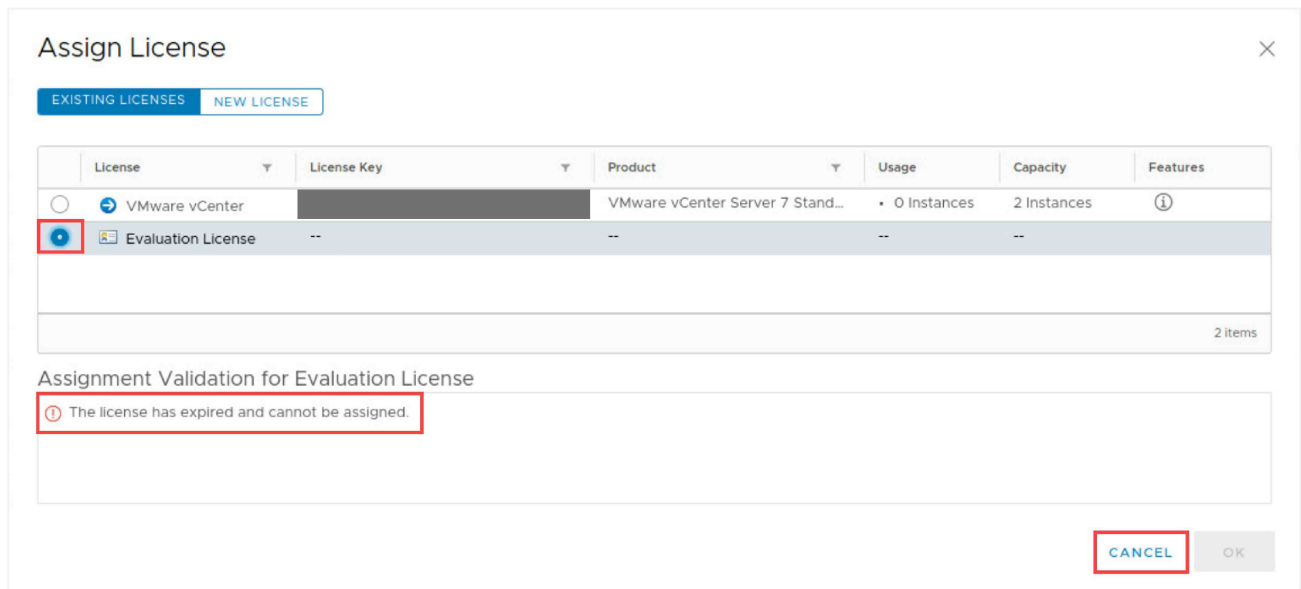

8. In the Licenses window, click on the Assets tab.

9. On the vCenter Server Systems tab, check the checkbox for 172.20.10.94 and click on Assign License.

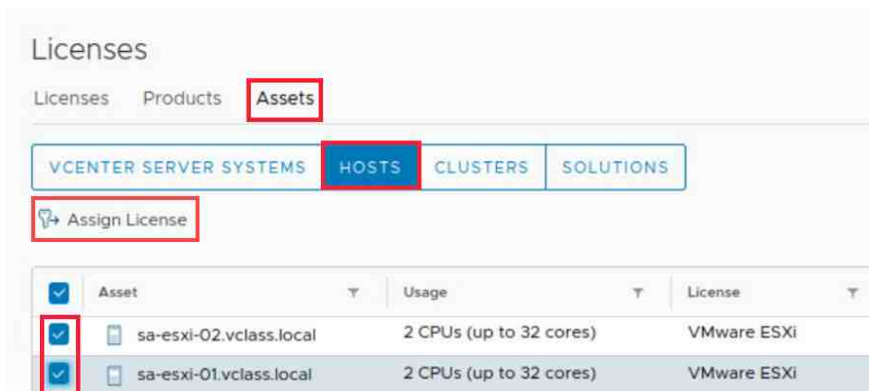

10. In the Assign License window, select the Evaluation License radio button. Click Cancel.

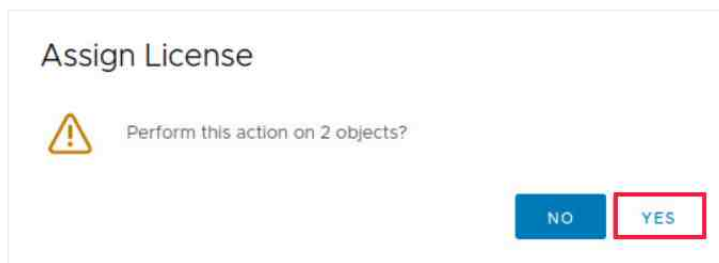

Notice the Evaluation License has expired and cannot be assigned. Once this message appears, your evaluation period has ended. The evaluation period begins the moment you install the VMware vCenter Server Appliance, putting it in evaluation mode. The evaluation license will expire and be unusable 60 calendar days after you do the initial install, regardless of if it was assigned to the vCenter Server or not. When the license assigned to vCenter Server expires, all the host/hosts will disconnect from that vCenter Server. Once a new license is applied, the affected host/hosts will then reconnect.

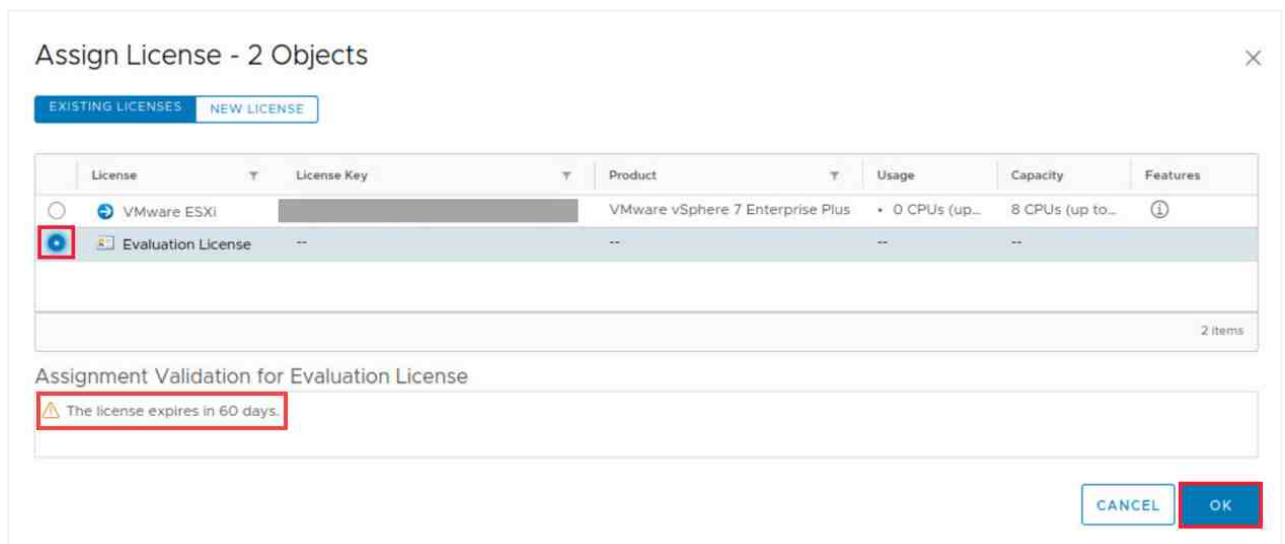

11. On the Assets tab, select the HOSTS tab and check the checkbox for sa-esxi-02.vclass.local and sa-esxi-01.vclass.local. Click Assign License.

12. On the Assign License warning window, click YES.

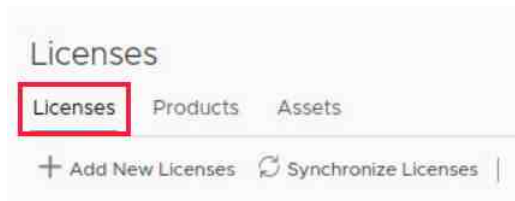

13. In the Assign License – 2 Objects window, select the Evaluation License radio button and click OK.

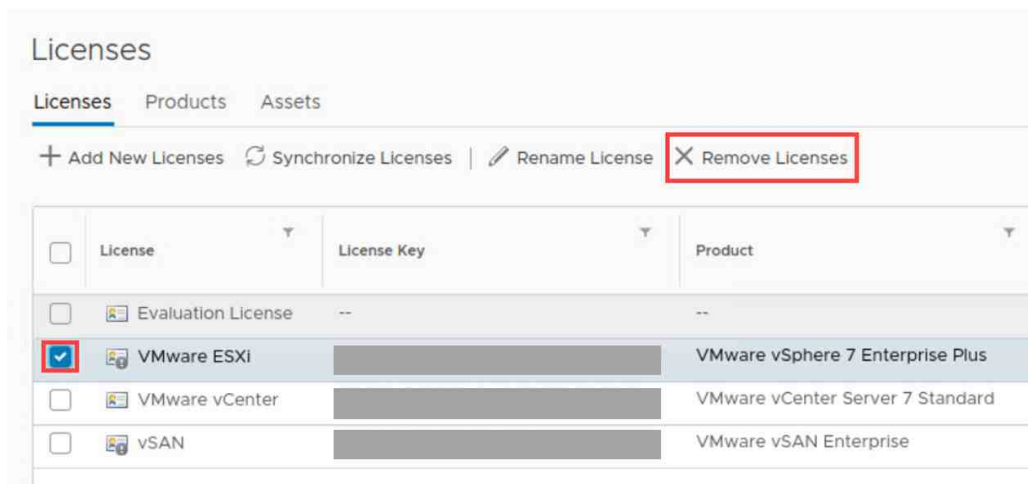

Notice the license expires in 60 days. Once the evaluation period begins, the clock starts and in 60 calendar days the license will expire and be unusable regardless of if it was assigned for the entire period or not.

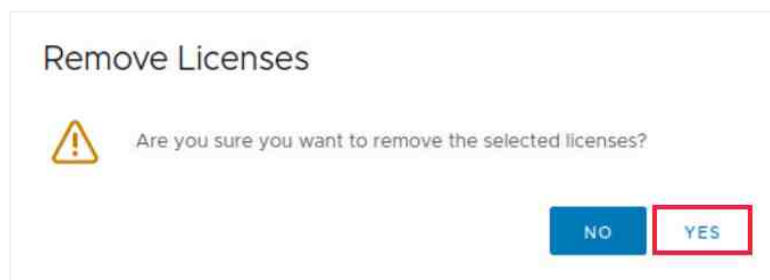

14. In the License window, click Licenses.

15. In the Licenses window, select VMware ESXi. Click Remove Licenses.

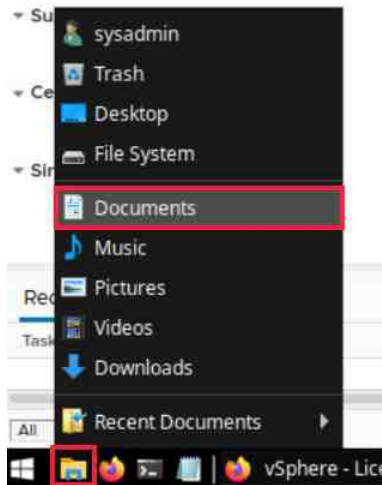

16. In the Remove Licenses window, click YES. Leave the Licenses window open and continue to the next task.

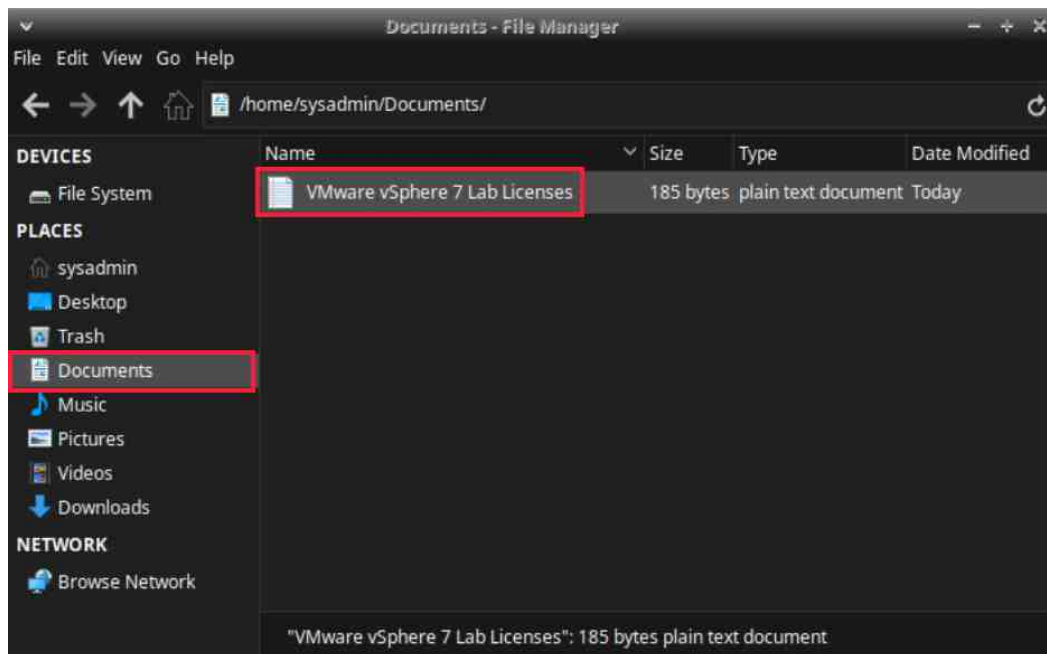

2 Add vSphere license to ESXi

In this task, you will assign a VMware vSphere 7 Enterprise license to ESXi.

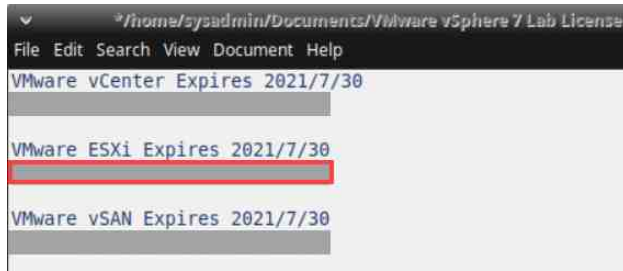

1. Change focus to the sa-student desktop. Open the Places folder and click Documents.

2. In the Documents - File Manager window, open the VMware vSphere 7 Lab Licenses text file.

3. In the VMware vSphere 7 Lab Licenses text file, copy the VMware ESXi license key by pressing Ctrl+C.

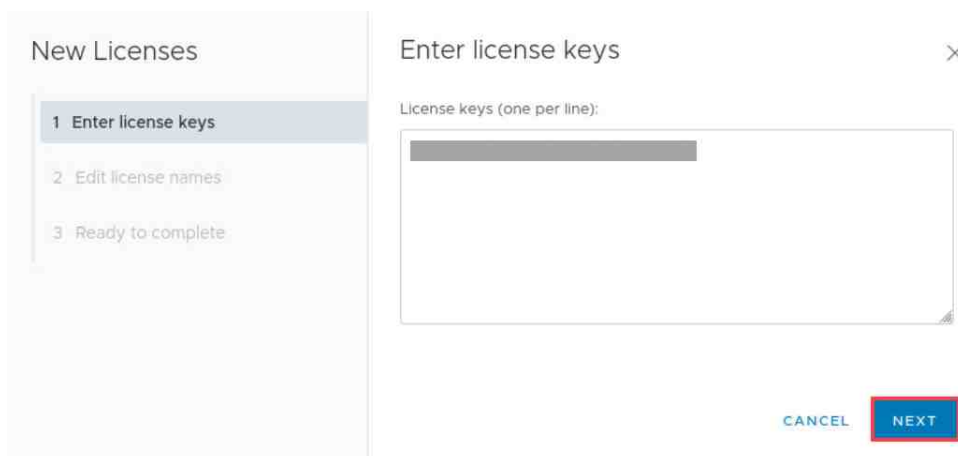

4. Close the VMware vSphere 7 Lab Licenses text file and Documents folder by clicking the x in the upper-right corner of the windows.

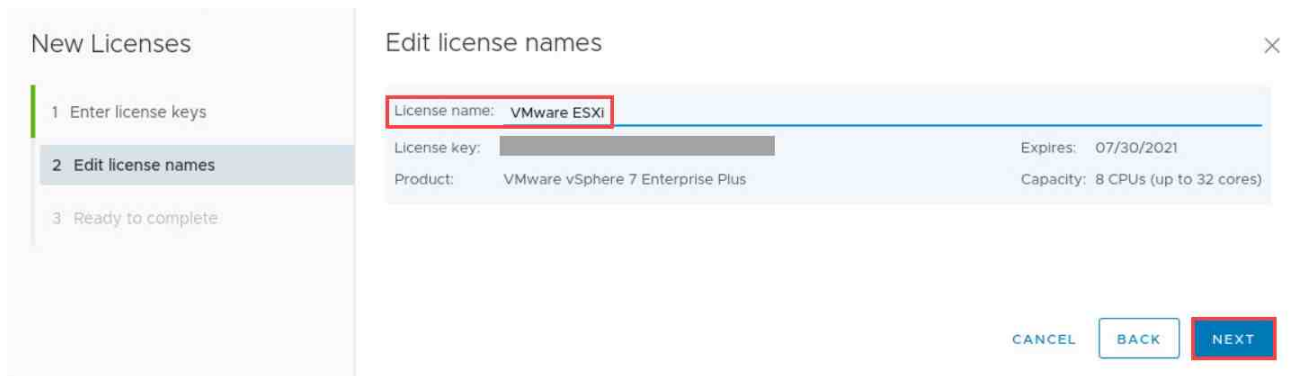

5. Click Add New Licenses.

6. In the New Licenses window, on the Enter license keys step, paste (CTRL+V) in the text field and make sure the correct license key has been populated for ESXi. Click Next.

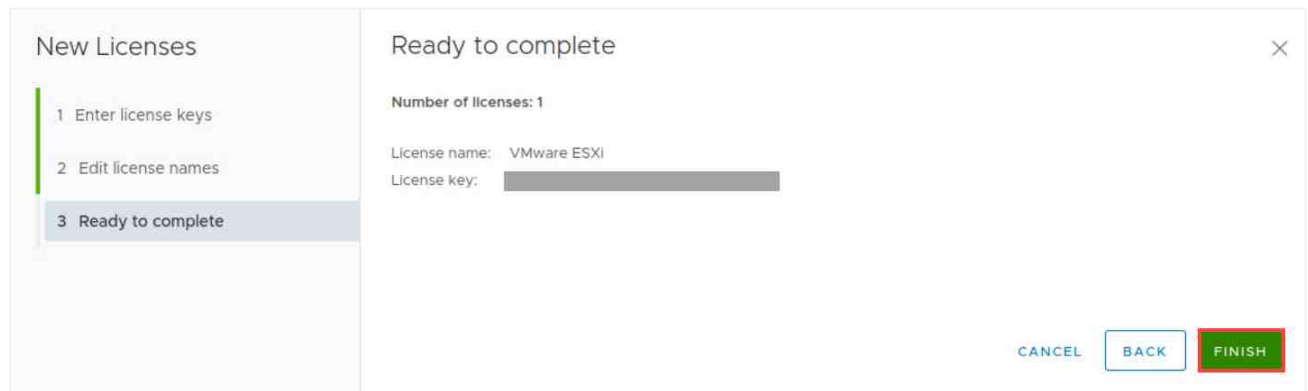

- On the Edit license names step, enter VMware ESXi as the license name for its respective key and click Next.

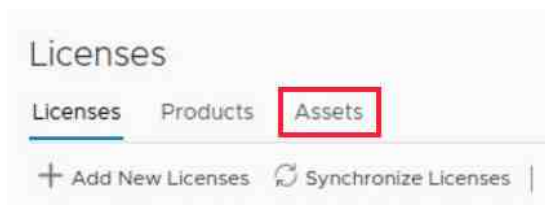

The screenshot shows the 'Edit license names' dialog box. On the left, a sidebar titled 'New Licenses' has three steps: '1 Enter license keys', '2 Edit license names' (which is highlighted), and '3 Ready to complete'. The main area of the dialog shows a table with one row. The 'License name' field is highlighted with a red box and contains the text 'VMware ESXi'. Other fields in the row include 'License key' (a grayed-out box), 'Product' (VMware vSphere 7 Enterprise Plus), 'Expires' (07/30/2021), and 'Capacity' (8 CPUs (up to 32 cores)). At the bottom right, there are three buttons: 'CANCEL', 'BACK', and 'NEXT'. The 'NEXT' button is highlighted with a red box.

- On the Ready to complete step, click Finish.

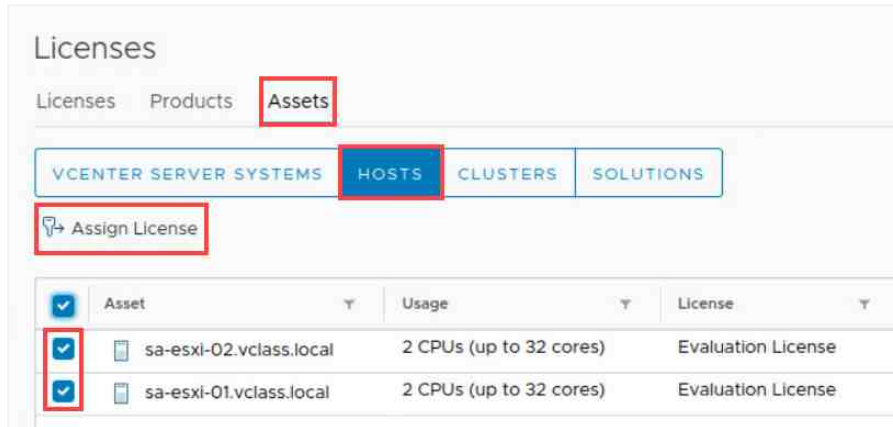

The screenshot shows the 'Ready to complete' dialog box. On the left, the 'New Licenses' sidebar now has '3 Ready to complete' highlighted. The main area shows 'Number of licenses: 1' and a table with one row. The 'License name' field contains 'VMware ESXi' and the 'License key' field is a grayed-out box. At the bottom right, there are three buttons: 'CANCEL', 'BACK', and 'FINISH'. The 'FINISH' button is highlighted with a red box.

- In the main workspace, click on the Assets tab.

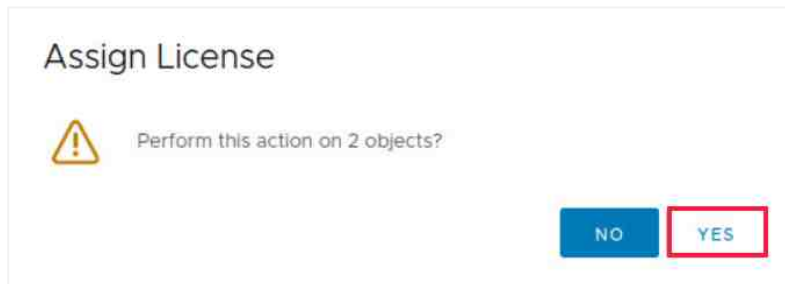

The screenshot shows the 'Licenses' tab in the main workspace. There are three tabs: 'Licenses', 'Products', and 'Assets'. The 'Assets' tab is highlighted with a red box. Below the tabs, there are two buttons: '+ Add New Licenses' and 'Synchronize Licenses'.

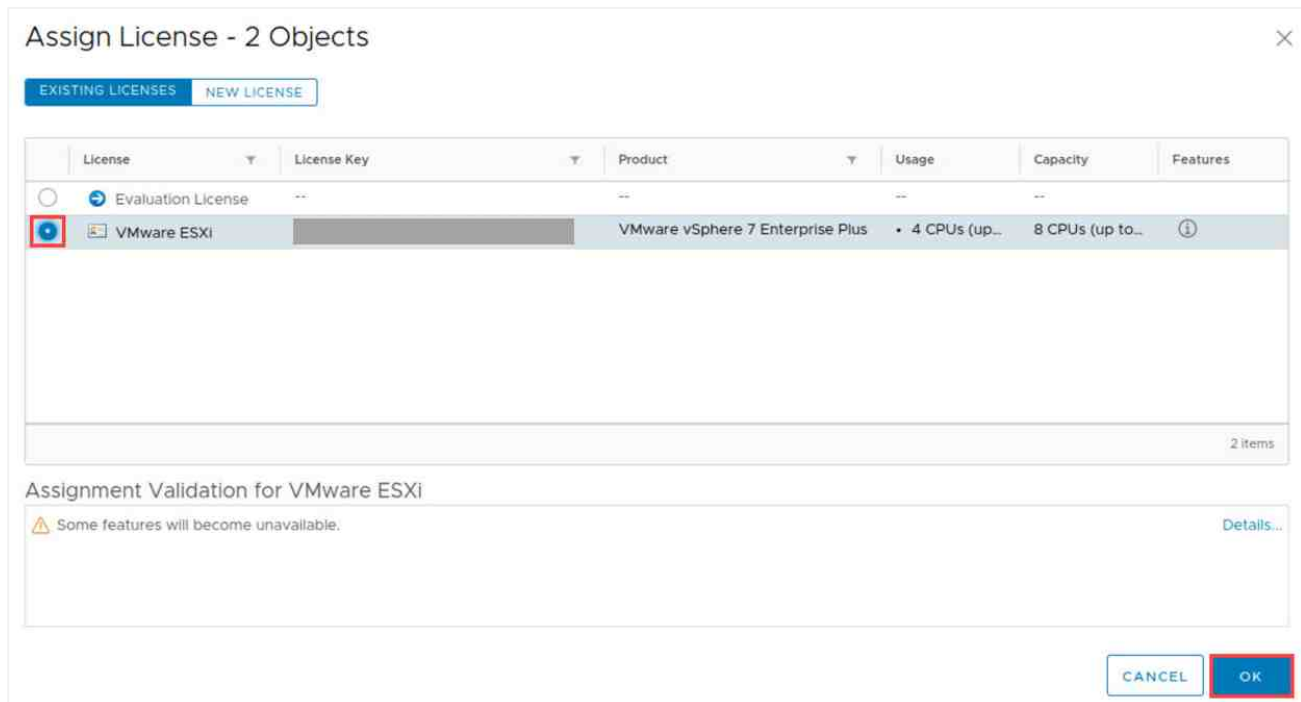

10. On the Assets tab, select the HOSTS tab and check the checkbox for sa-esxi-02.vclass.local and sa-esxi-01.vclass.local. Click Assign License.

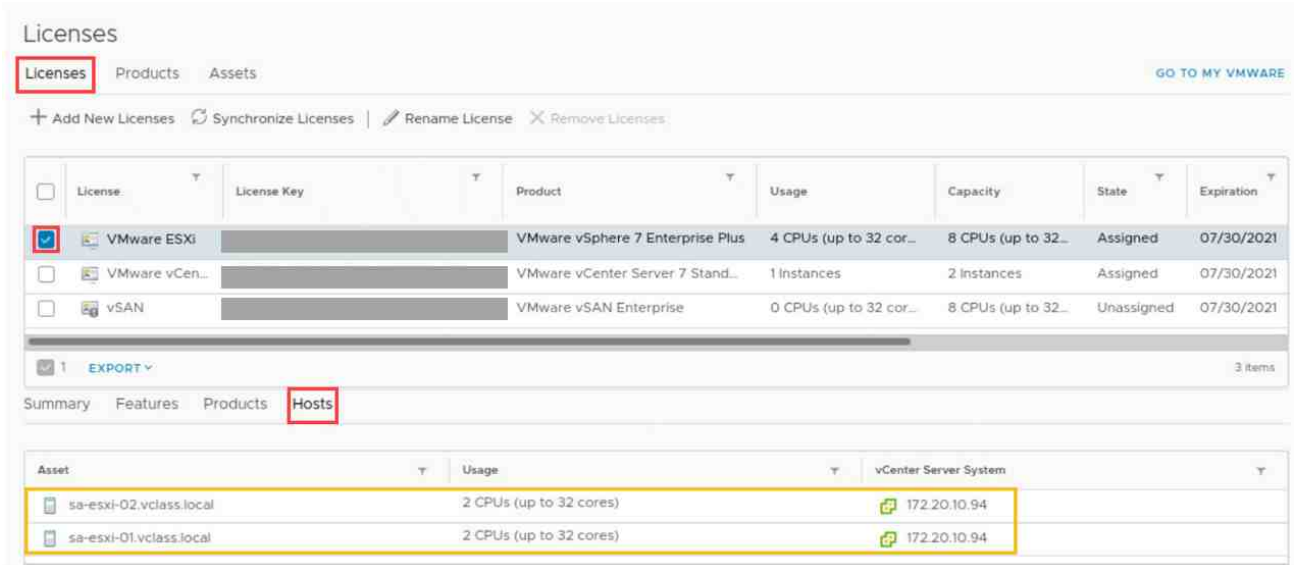

11. On the Assign License warning window, click YES.

12. In the Assign License – 2 Objects window, select the VMware ESXi radio button and click OK.

13. In the main workspace, click on the Licenses tab. Select the VMware ESXi license and click Hosts. Verify that sa-esxi-01.vclass.local and sa-esxi-02.vclass.local are showing for the host assigned to the VMware ESXi license.
